

Instacart Reorder Behavior

Key Findings

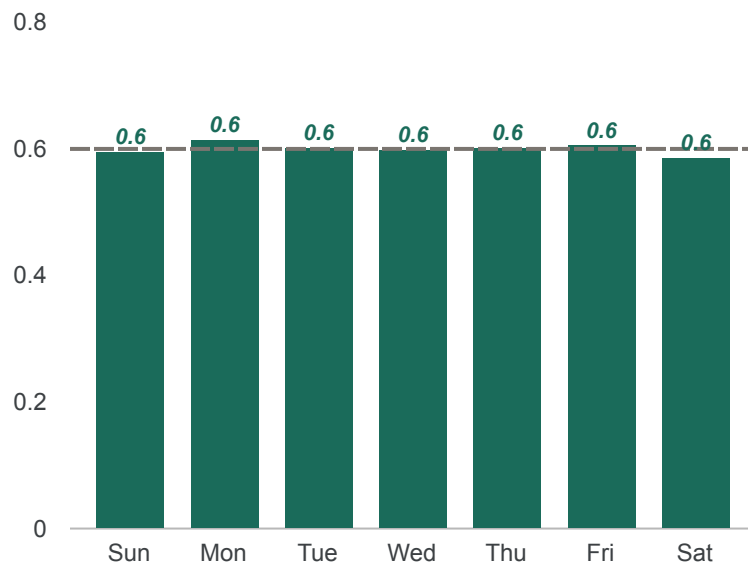

Total Orders Analyzed
3.4M

Repeat Orders w/ 30+ Day Gap
11.5%

Avg Reorder Ratio
0.6

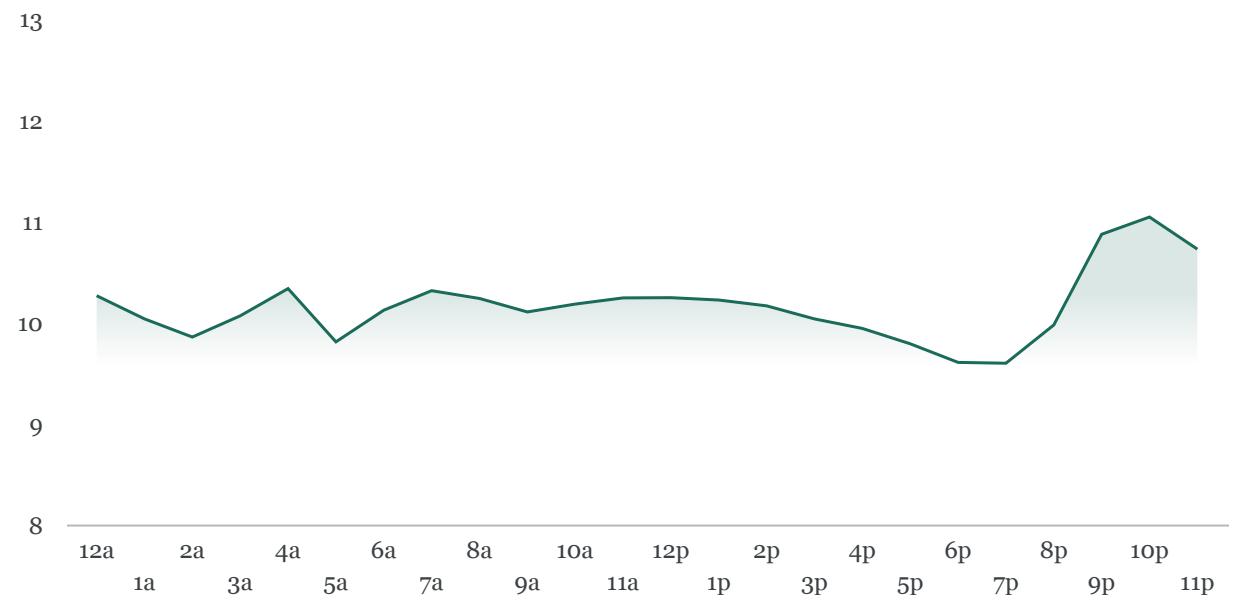

On average, 6 out of every 10 items in an Instacart order are something the customer has bought before. But this average hides a 3x difference by user tenure — see page 2.

Reorder rate by day of week

| **Note:** Flat across all days |

When people shop

| **Note:** Late evening spike at 9 - 10PM, largest orders of the day |

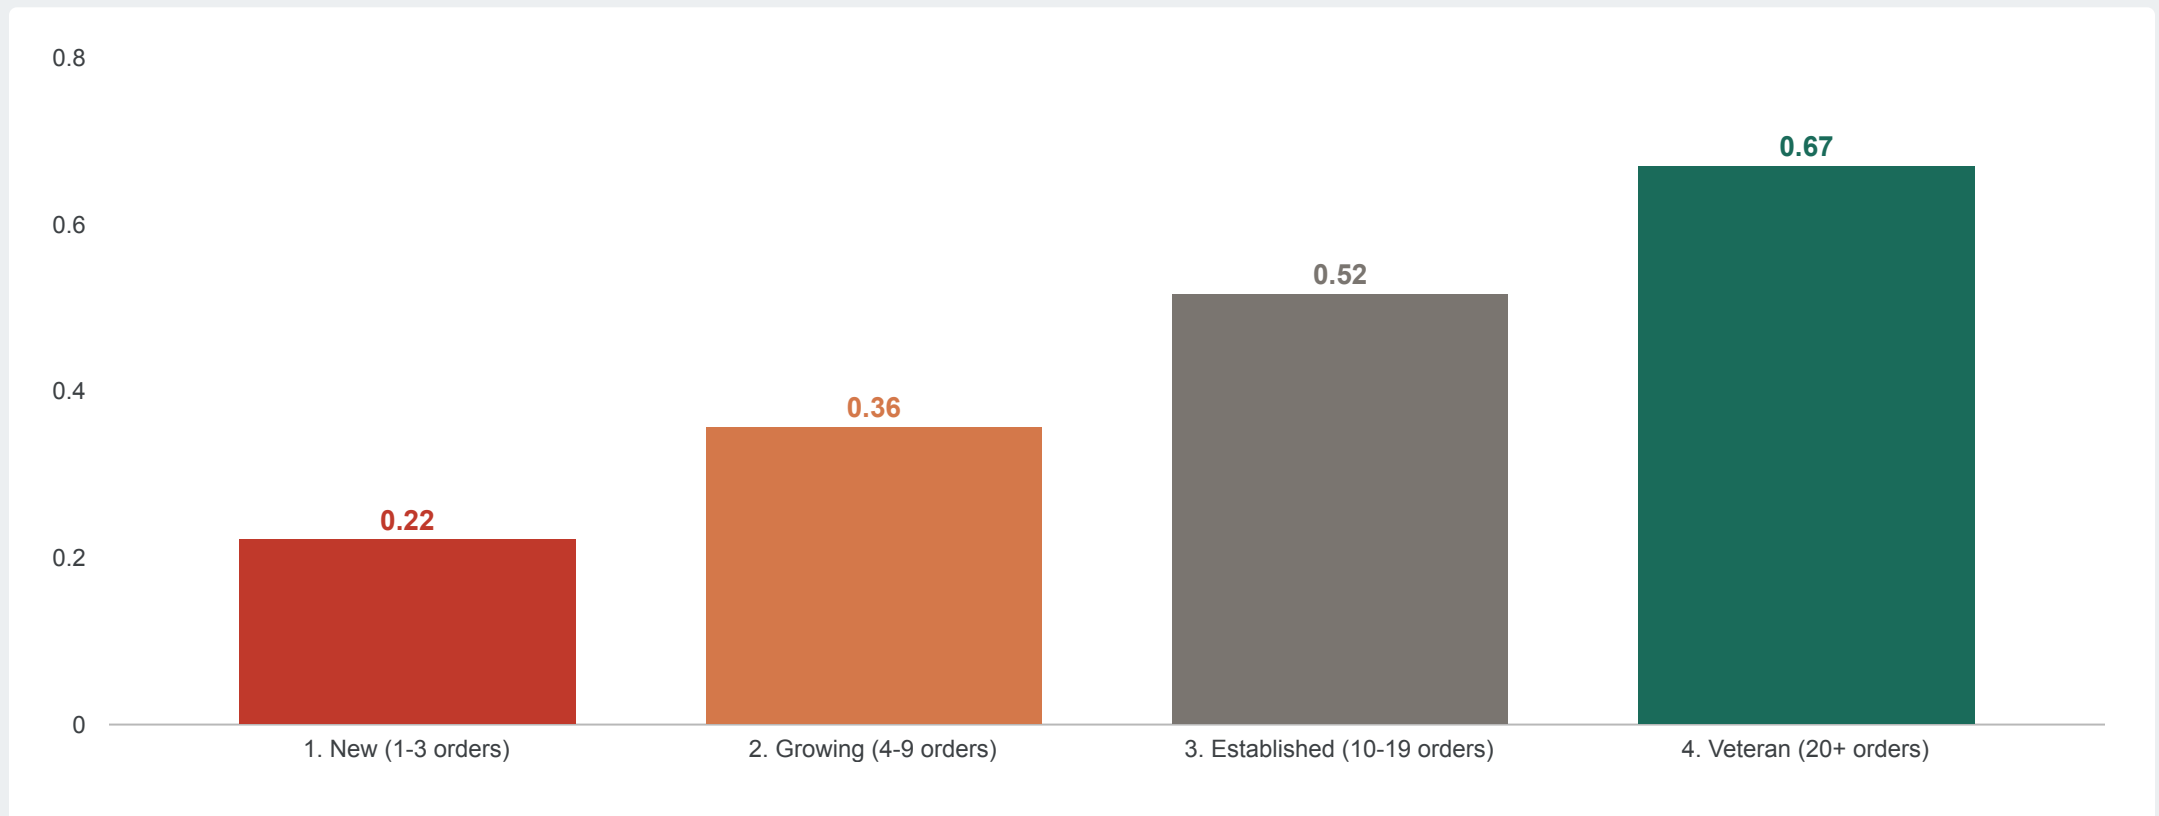

Instacart Reorder Behavior

The 0.6 Average Hides a 3x Difference

New users reorder 1 in 5 items. Veteran users reorder 2 in 3. Same platform. They are the same metric, with completely different behavior.

Reorder ratio by user tenure

| **Note:** The data only becomes reliable for prediction after 10+ orders. Any model trained on all users equally is averaging over two fundamentally different populations. |
